LASERSCOPE

June 1, 1990

Dear Doctor:

Recently, there has been much confusion generated about which manufacturer is cleared by the FDA to promote **Laparoscopic Laser Cholecystectomy**. Please be assured that Laserscope's KTP/532™ Surgical Laser System is fully FDA cleared for all open, endoscopic and laparoscopic applications in General Surgery under the 510(k) numbers, K881788 and K901943.

Laserscope's clearances cover a very broad range of open, endoscopic and laparoscopic procedures such as cholecystectomy, appendectomy, hernia, liver biopsy and enterolysis.

Laserscope will be participating in *An Introductory Course in Laparoscopic General Surgery* with Eddie Joe Reddick, M.D. as the Course Director in Newport Beach, CA on July 2, 1990. This intensive one day course includes both didactic and video presentations on all aspects of **Laparoscopic Laser General Surgery**. The course meets the criteria for 8 CME credits and tuition is \$500. Please call (408)943-1786 to enroll in the course.

Laserscope continues to be the leader in Laparoscopic General Surgery. More gallbladders have been resected laparoscopically with the KTP/532 Surgical Laser System than any other surgical instrument. For more information or a video tape on Laserscope's KTP/532 System in laparoscopic laser General Surgery write or call Bill Smith at (800)356-7600.

Best Regards,

Brad Sylvester
Director of Clinical Marketing
